

Location:
Sangatta, East Kalimantan

Value:
US\$835 Million

Client:
PT Kaltim Prima Coal

Contract Type:
Mining Services Schedule of Rates for Coal Delivered to Designated ROM Stockpile

Duration:
October 2003 to October 2020

Description of Works

In October 2003, Thies Indonesia secured a life of mine contract with PT Kaltim Prima Coal (KPC) to operate a number of open pits at one of the world's largest thermal coal reserves.

Thies' Role

The contract was an extension of Thies' long-term contract mining activities at the KPC Mine. Thies' initial works commenced in 1989 with a mine infrastructure contract that included earthworks, piping, tankage, water treatment plants and other ancillary works.

The ongoing contract involves managing four of KPCs pits and services cover from mine planning, stripping, coal mining, blasting, over burden removal to stock piling. Additional works undertaken include coal haulage from the pits up to 15km to processing facilities. The contract includes revegetation of mined areas.

Project Delivery

Thies Indonesia's average annual coal production on site is 15MT per annum from 105 bank cubic metres (BCM) of overburden. Mining across the pits is predominately open cut.

The total workforce, including administration, mining operations and maintenance personnel is more than 2000.
