

Location:
Garut, West Java, Indonesia

Value:
US\$85 Million (Approx)
Thiess shares 70% of the total contract

Client:
Chevron Geothermal Indonesia Ltd

Contract Type:
Lump Sum

Duration:
November 2004 to September 2006

Description of Works:

PT Thiess Contractors Indonesia in a consortium with Kanematsu Corporation, was awarded the contract for engineering, procurement and construction of the Darajat Unit 3 Geothermal Power Plant Project by Chevron Texaco Energy Indonesia. The project duration is 22 months with completion scheduled for September 2006. Throughout the project Thiess is responsible for leading the consortium, management and execution of the total contract. Kanematsu is responsible for the design, supply and commissioning of the Mitsubishi Heavy Industries Steam Turbine Generator package.

The project includes the development of a 110 MW Geothermal Power Plant at Darajat, near Garut, West Java, Indonesia. It is the third stage of Chevron Texaco's development of the Darajat Geothermal Resource. Unit 3 will be installed on a common site and is an extension to Chevron Texaco's existing Darajat 2 Geothermal Power Plant. The two units will share common facilities, including the steam gathering system.

The works include:

- Power plant, which comprises engineering, procurement, construction, testing and commissioning of the Unit 3 Power Plant next to, and interconnected with, the existing Unit 2, including installation of a turbine generator unit and all associated auxiliaries and works.
- Steamfield, which comprises procurement, construction, testing and commissioning (to a design supplied by company) of an expansion to the existing geothermal steam gathering system, to connect additional geothermal wells, and
- All associated works and services related to the interconnection between Unit 2 and Unit 3.
